DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

2. Claim 1 is objected to because of the following informalities: line 2, "-type" should be deleted. Appropriate correction is required.

Claim Rejections - 35 USC § 103

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith et al, US, 5,455,409, cited by the applicant, in view of Ruppert et al, US Patent No. 5,640,002.

Smith et al disclose an apparatus and method for monitoring a plurality of coded articles and for identifying the location of selected articles comprising: a computer 52 having a communication converter 62 for receiving data signals from data storage devices 10 within the carriers 12 (see col. 17, line 4), a memory means capable for storing said data signals received from the converter 62 (see col. 14, line 25), the computer inherently includes a

Art Unit: 2876

controller/processor for controlling the functions of the apparatus (see figures 6, 8A-D; col. 10, line 3+; col. 14, line 18+).

Smith et al disclose identification code is printed on labels attached to the tape cartridges (see col. 8, line 24), but fail to disclose a hand-held reader device and the specific of a printer device for printing the identification code.

Ruppert et al disclose a portable RF ID tag and bar code reader comprising: a body 302; a card slot 300; an antenna 304 coupled to an RF module; a display unit 308; a printer 310; a microcomputer 320; an RF/ID reader 314; contact smart card interface 514 and non-contact smart card interface 517; etc. (see figures 16-19).

In view of Ruppert et al's teachings, it would have been obvious for a person of ordinary skill in the art at the time the invention was made to modify the system of Smith et al into a portable hand-held system for monitoring and programming the cartridges. Such modification would make the system more effective wherein the mobile unit could be held/placed at various positions to receive optimal signals. Further, such modified system would be very compact, which would facilitate operators interaction with the unit to obtain greater transactions output. Therefore, it would have been an obvious extension as taught by Smith et al.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Schultz et al, US Patent No. 5,679,943, disclose a hand-held terminal with display screens, interactive screens magnetic credit card readers, scanners, printers and handlers. Compact bar code scanner.
